

IN THE CLAIMS:

The status of each claim that has been introduced in the above-referenced application is identified in the ensuing listing of the claims. This listing of the claims replaces all previously submitted claims listings.

1. (Previously presented) A hand-held pick-and-place apparatus, comprising:  
a body configured to be grasped by a hand of an individual;  
a grasping element associated with an end of the body and including an end for adhesion to a piece to be picked while leaving substantially no residue on the piece.
2. (Previously presented) The hand-held pick-and-place apparatus of claim 1, wherein the body includes a chamber for receiving at least a portion of the grasping element.
3. (Previously presented) The hand-held pick-and-place apparatus of claim 1, further comprising:  
a tip securable to the body, the tip including at least one channel through at least a portion of a length thereof, the at least one channel being configured to receive at least a portion of the grasping element, the end for adhesion exposable through an end of the tip.
4. (Previously presented) The hand-held pick-and-place apparatus of claim 3, wherein the tip is configured to move longitudinally to a plurality of positions relative to the body to facilitate at least one of exposure and storage of the grasping element.
5. (Previously presented) The hand-held pick-and-place apparatus of claim 4, wherein a tip-engagement element of the body and a body-engagement element of the tip include complementary threading.
6. (Previously presented) The hand-held pick-and-place apparatus of claim 5, further comprising:

a cap configured to receive at least the end for adhesion of the grasping element and to be secured to the tip.

7. (Previously presented) The hand-held pick-and-place apparatus of claim 6, wherein the cap is configured to be secured to the tip such that rotation of the cap results in rotation of the tip.

8. (Previously presented) The hand-held pick and place apparatus of claim 4, further comprising a plunger including a tip positioned coaxially within the body and configured to be positioned in-line with the at least one channel of the tip for insertion therein.

9. (Previously presented) The hand-held pick-and-place apparatus of claim 4, further comprising:  
an interior fixed element within the body which limits a distance the tip may be inserted into a chamber of the body.

10. (Previously presented) The hand-held pick-and-place apparatus of claim 1, further comprising:  
a cap configured to receive at least the end for adhesion of the grasping element and to be secured in place relative to the body.

11. (Previously presented) The hand-held pick-and-place apparatus of claim 1, further comprising:  
an accessory tool configured to be secured to another end of the body.

12. (Previously presented) The hand-held pick-and-place apparatus of claim 11, wherein at least a portion of the accessory tool is configured to be received by the another end of the body.

13. (Previously presented) The hand-held pick-and-place apparatus of claim 11, wherein the accessory tool includes a portion which is configured to be grasped by a hand of the individual.

14. (Previously presented) The hand-held pick-and-place apparatus of claim 11, wherein the accessory tool includes a tool comprising at least one of a rounded stylus, a placement tip, tweezers, a ball point, an adhesive applicator, a brush, a scraper, a cutting blade, a poker, and a writing or marking instrument.

15. (Previously presented) The hand-held pick-and-place apparatus of claim 11, wherein the accessory tool includes at least two tools which extend in opposite directions.

16. (Previously presented) The hand-held pick-and-place apparatus of claim 15, wherein at least one of the at least two tools is configured to be at least partially received within a chamber of the body that communicates with the another end.

17. (Previously presented) The hand-held pick-and-place apparatus of claim 15, wherein at least one of the at least two tools is configured to be removed from a center section of the accessory tool.

18. (Previously presented) An adhesive tip for a hand-held pick-and-place apparatus, comprising:

a grasping element; and

a tip including:

at least one channel extending longitudinally through at least a portion of the tip for

receiving at least a portion of the grasping element; and

a body-engagement element configured to be secured to a body of the hand-held

pick-and-place apparatus and to be rotated relative to the body so as to cause the

grasping element to be extruded from the tip or retracted therein; and

~~at least one channel extending longitudinally through at least a portion of the tip; and  
a grasping element disposed at least partially within the at least one channel.~~

19. (Previously presented) The adhesive tip of claim 18, wherein at least one end of the grasping element protrudes from the body-engagement element.
